Name : .....

Register No. : ..... 2315010 82

Year / Branch / Section : ..... First, AIML - B

Semester : ..... II

Academic Year : ..... 2023-2024

## LESSON PLAN

| Course Code | Course Title<br>(Laboratory Integrated Theory Course) | L | T | P | C |
|-------------|---|---|---|---|---|
| CS23231     | Data Structures                                       | 1 | 0 | 6 | 4 |

| LIST OF EXPERIMENTS |  |
|---------------------|--|
| Sl. No              | Name of the experiment   |
| Week 1              | Implementation of Single Linked List (Insertion, Deletion and Display)   |
| Week 2              | Implementation of Doubly Linked List (Insertion, Deletion and Display)   |
| Week 3              | Applications of Singly Linked List (Polynomial Manipulation)             |
| Week 4              | Implementation of Stack using Array and Linked List implementation       |
| Week 5              | Applications of Stack (Infix to Postfix)                                 |
| Week 6              | Applications of Stack (Evaluating Arithmetic Expression)                 |
| Week 7              | Implementation of Queue using Array and Linked List implementation       |
| Week 8              | Implementation of Binary Search Tree                                     |
| Week 9              | Performing Tree Traversal Techniques                                     |
| Week 10             | Implementation of AVL Tree   |
| Week 11             | Performing Topological Sorting   |
| Week 12             | Implementation of BFS, DFS   |
| Week 13             | Implementation of Prim's Algorithm                                       |
| Week 14             | Implementation of Dijkstra's Algorithm                                   |
| Week 15             | Program to perform Sorting   |
| Week 16             | Implementation of Open Addressing (Linear Probing and Quadratic Probing) |
| Week 17             | Implementation of Rehashing  |

## INDEX

| S. No. | Name of the Experiment   | Expt. Date | Faculty Sign |
|--------|--|------------|--------------|
| 1      | Implementation of Single Linked List (Insertion, Deletion and Display) | 2/2/24     |              |
| 2      | Implementation of Doubly Linked List (Insertion, Deletion and Display) | 9/3/24     |              |
| 3      | Applications of Singly Linked List (Polynomial Manipulation)           | 16/3/24    |              |
| 4      | Implementation of Stack using Array and Linked List implementation     | 23/3/24    |              |

| EXPT NO.: 1  | <b>Implementation of Single Linked List</b><br><b>(Insertion, Deletion and Display)</b> |
| DATE: 2/2/24 |   |

### AIM:

To write a program to implement singly linked list.

### PROGRAM:

```
// Linked List Node
struct node {
    int info;
    struct node* link;
};
struct node* start = NULL;

// Function to create list with n nodes initially
void createList()
{
    if (start == NULL) {
        int n;
        printf("\nEnter the number of nodes: ");
        scanf("%d", &n);
        if (n != 0) {
            int data;
            struct node* newnode;
            struct node* temp;
            newnode = malloc(sizeof(struct node));
            start = newnode;
            temp = start;
            printf("\nEnter number to"
                " be inserted : ");
            scanf("%d", &data);
            start->info = data;

            for (int i = 2; i <= n; i++) {
                newnode = malloc(sizeof(struct node));
                temp->link = newnode;
                printf("\nEnter number to"
                    " be inserted : ");
                scanf("%d", &data);
                newnode->
```

```

        temp = temp->link;
    }
    }
    printf("\nThe list is created\n");
}
else
    printf("\nThe list is already created\n");
}

```

```

// Function to traverse the linked list
void traverse()
{

```

```

    struct node* temp;

    // List is empty
    if (start == NULL)
        printf("\nList is empty\n");

    // Else print the LL
    else {
        temp = start;
        while (temp != NULL) {
            printf("Data = %d\n", temp->info);
            temp = temp->link;
        }
    }
}

```

```

// Function to insert at the front
// of the linked list
void insertAtFront()
{

```

```

    int data;
    struct node* temp;
    temp = malloc(sizeof(struct node));
    printf("\nEnter number to"
           " be inserted : ");
    scanf("%d", &data);
    temp->info = data;

    // Pointer of temp will be
    // assigned to start
    temp->link = start;
    start = temp;
}

```

```

// Function to insert at the end of
// the linked list
void insertAtEnd()
{

```

```

    int data;
    struct node *temp, *head;
    temp = malloc(sizeof(struct node));

    // Enter the number

```

```

printf("\nEnter number to"
      " be inserted : ");

}

```

## OUTPUT:

```
1  To see list
2  For insertion at starting
3  For insertion at end
4  For insertion at any position
5  For deletion of first element
6  For deletion of last element
7  For deletion of element at any position
8  To find maximum among the elements
9  To find mean of the elements
10 To sort element
11 To reverse the linked list
12 Search an element in linked list
13 To exit

Enter Choice :
```

## RESULT:

Hence the program has been executed successfully.

| EXPT NO.: 2  | <b>Implementation of Doubly Linked List<br/>(Insertion, Deletion and Display)</b> |
| DATE: 9/3/24 |   |

### AIM:

To write a program to implement doubly linked list.

### PROGRAM:

```
#include <stdio.h>
#include <stdlib.h>
int i = 0;

// Node for Doubly Linked List
typedef struct node {
    int key;
    struct node* prev;
    struct node* next;
} node;

// Head, Tail, first & temp Node
node* head = NULL;
node* first = NULL;
node* temp = NULL;
node* tail = NULL;

// Function to add a node in the
// Doubly Linked List
void addnode(int k)
{
```

```

// Allocating memory
// to the Node ptr
node* ptr
    = (node*)malloc(sizeof(node));

// Assign Key to value k
ptr->key = k;

// Next and prev pointer to NULL
ptr->next = NULL;
ptr->prev = NULL;

// If Linked List is empty
if (head == NULL) {
    head = ptr;
    first = head;
    tail = head;
}

// Else insert at the end of the
// Linked List
else {
    temp = ptr;
    first->next = temp;
    temp->prev = first;
    first = temp;
    tail = temp;
}

// Increment for number of Nodes
// in the Doubly Linked List
i++;
}

// Function to traverse the Doubly
// Linked List
void traverse()
{
    // Nodes points towards head node
    node* ptr = head;

    // While pointer is not NULL,
    // traverse and print the node
    while (ptr != NULL) {

        // Print key of the node
        printf("%d ", ptr->key);
        ptr = ptr->next;
    }

    printf("\n");
}

```

```

// Function to insert a node at the
// beginning of the linked list
void insertatbegin(int k)
{
